

TOXO®-HP

Helping protect performance with precision

Part of the Mycotoxin Risk Management Programme from Trouw Nutrition

From hidden mycotoxin pressure to mycotoxin risk management

In swine production, mycotoxins in complete feed can exert hidden pressure long before any visible signs appear. These mycotoxins can affect gut health, immunity and liver functions leading to poor health and animal performance.

So mycotoxin risk management must be preventive, not corrective.

TOXO-HP is our newest solution, designed so it might help reduce the bioavailability and biological impact of multiple mycotoxins in swine. It is designed for inclusion in feed programmes to help manage the impact of multiple mycotoxins.

What makes TOXO-HP effective?

Most mycotoxin mitigation solutions, including those in the TOXO portfolio, are based on smectite clays. These clays help to bind mycotoxins in the digestive tract, supporting their removal from the body of the animal.

TOXO-HP goes beyond traditional binding methods by offering targeted enzymatic biodegradation, providing a more precise approach to support managing complex mycotoxin challenges in swine production. Designed for inclusion in feeding programmes, TOXO-HP helps to support the proactive management of mycotoxin risk where multiple mycotoxins may affect animal performance and resilience.

Supporting healthy, resilient swine

TOXO-HP may help you manage hidden multi-mycotoxin pressure by addressing fumonisin exposure through targeted biodegradation. This is combined with mycotoxin binding and immune resilience support.

For sows: May help reduce the negative effects of multi-mycotoxins on sphingolipid metabolism, liver health and reproductive health.

For piglets: May help reduce the biological damage caused by fumonisins, protecting liver function and metabolic health.

Recommended dosage for swine:
0.5–2 kg/t of complete feed.

TOXO-HP: Part of the Mycotoxin Risk Management Programme

TOXO-HP is most effective when used as part of our Mycotoxin Risk Management Programme. The programme gives you access to our digital tools, on-site analysis and MasterLab facility, which help accurately evaluate mycotoxin exposure and data interpretation. You will also receive ongoing expert support to help you select the right TOXO solution and monitor results, giving you control and confidence in your mycotoxin risk management.

- 1) **Detect risk**
- 2) **Confirm risk**
- 3) **Interpret risk**
- 4) **Select the right TOXO solution**

Accurate diagnostics

Expertise and training

Helps improve confidence and safety

May support swine performance

May help protect profitability

**Ready to upgrade your
mycotoxin risk management strategy?**
