Proven on farm

Visibly stronger calves resulting in a first breeding 3 weeks earlier and a more resilient dairy herd

"Proven results where it matters most"

A more resilient and stronger calf

- Calves show more consistent development
- Increased starter feed consumption leads to stronger growth
- Calves are visibly larger and stronger by 3 months

"More resilient calves, proven time and again"

Optimised rearing investment

- Reach breeding weight 3 weeks earlier
- Save €40-€60 per calf in rearing costs
- Spend less time and resources on health management

"Endorsed by farmers, backed by results"

Building a resilient dairy herd

- Bioavailable nutrients lead to efficient feeding and stronger calves
- Higher milk production and fewer replacement animals needed
- Reduced mineral waste for a more sustainable farm

"Efficiency on the farm, sustainability for the future"
