Selko®

Mycotoxin Risk Management Programme

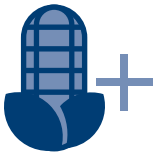

When it comes to mycotoxin exposure, always use the correct tool for the job

trouw nutrition
a Nutreco company

A programme that helps being in control and securing feed quality

Smarter selection of raw material supplier

Improved feed quality

Better control of mycotoxin levels

Reduced production cost

Improved profitability & performance on farm

Business case: A large feed mill needs to prove the quality of its products

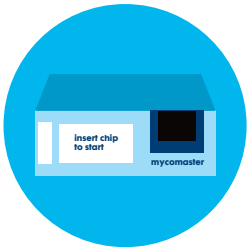

Challenges

- Raw material quality control
- Rapid and reliable analysis at acceptable cost
- Achieve efficiency in the use of mycotoxin mitigation solutions

Impact

- Increased risk of mycotoxin contaminated feed
- Increased production cost
- Economic loss associated with poor animal health and performance

Action plan

Select and monitor raw materials with Mycomaster:
- More flexibility for the producer
- Reduced analysis costs

Advice to define protocol and frequency of monitoring for specific mycotoxins

Access to the NutriOpt Mycotoxin Adviser, to help predict risks and plan control measures

Selko Mycotoxin control solutions, adjusted to identified risk

Managing the risk makes the difference in mycotoxin control

1) Identify risk and contamination levels

- Mycomaster on-site rapid analysis
- Improve mycotoxin contamination predictability through the use of NutriOpt Mycotoxin Adviser
- Health and performance review with Trouw Nutrition specialists

2) Implement risk control measures

- Add mycotoxin solution at recommended dose
- Control mould with mould inhibitor
- Adapt feed formulation
- Adapt purchasing strategy
- Adapt monitoring frequency

3) Evaluate effect

- Health and performance review with Trouw Nutrition specialists
- Monitor raw material contamination with Mycomaster

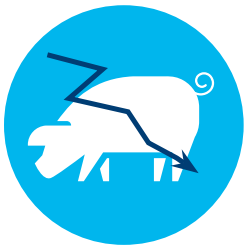

The key to mycotoxin control is risk management. Results from an integrated approach are better than isolated measures. A risk management programme enables feed producers to make decisions based on knowledge and data, and to use Mycotoxin control products more precisely. It also allows them to actively monitor mycotoxin risk, raising confidence in their products.
